## **Create a High Quality Low Cost Business Website using New Google Tools**

Small businesses across California are getting online through a free program from Google. Join us for an exciting hands-on workshop, in a computer lab, where you will create an easy-to-build Intuit website, get a free

customized domain name, get free web hosting for one year, and learn about free online tools and training. You will actually create a functioning website in this class, so come prepared with a Gmail account (available free from Google) and a flash drive with any photos or information such as bios, "about us", or product information that you may want to upload to your new website. This training is held in a computer lab with limited seating.

**Date: Tuesday, September 18, 2012**
