AND SAN ANTONIO ROP

Water 101 & Introduction to Distribution I

Today, the need for certified and trained water technology professionals is at an all-time high. Industry experts project an overwhelming number of retirees over the next 10 years, which will in turn create a shortage of employees to treat and distribute our public water supply.

The Water Technology Program is designed to prepare students who wish to seek entry level employment in the public water supply industry or qualify for a more responsible position within the field.

FALL 2009
